# Android Milestone 8 Review
September 18, 2022
Next-Door Rental

Logo on app screen looks good!

Opening page "Next-Door Rental"

- Map should be populated based off of users' registered address. We will have to see how populated the map gets to know how much to show (30km radius, 50km, etc). We want things to be clear for the users.
- There should not be two Magnifying glass search areas on the home page. The search area at the top of the screen should be eliminated and if the user wants to search, they just click on the magnifying glass on the footer.
- Where is the profile page located? We originally had profile in the footer. This is a large section of the application and needs to be in the footer.
- We propose 5 footer Icons in order:
  o Home
  o Explore
 o Transaction
  o Message
  o Profile
-
 notificati

These don't go in "Profile". Notifications (handled in "notifications"), Allow GPS location (handled in "permissions"), Camera access (handled in "permissions"), Important messages (handled in notifications).

- "Connect Bank account" needs to be set up here. Initially, the request for registration of a bank account will be in the "Register Products" screen.
    - o Our thoughts are: all users will sign up with their credit cards and we will verify those credit cards used for payments. To be a Lender, users will also have the option to select where their payments go by "connect bank account". This will greatly benefit our users.
- Shows multiple addresses if applicable.
- **Question for Augers**: What is the purpose of User ID from a user's perspective? Can they do anything with it? We may hide with for the users' perspective.
    - o The only reason we had mentioned to have the unique ID is through a scannable QR Code. A user (Renter or Lender) might scan the other user's QR Code to get information on the associated scheduled transactions so the user can just click on the transaction that has previously been scheduled. This would make the pickup and drop off transaction very easy for both the renter and the lender.
        1. Transactions that are active on the Renter's screen are:
            1. Items listed in the transaction list for Pickup:
                - o Any Items not already picked up from this Lender, Sorted ascending by scheduled pickup date
            2. Items listed in the transaction list for Return:
                - o Any Items that have been picked up from this Lender, Sorted ascending by scheduled return date
        2. Or if no transactions are active, the available items that the Lender has listed.
        3. Similar functionality for the Lender would appear on his/her screen.
- **Question for Augers** on the Camera Toggle On/Off:

- o We need the camera GPS and timestamp information turned on in the app to allow for verification of the product location, pickup/return time. This is a condition of pickup or return. If the user turns off the camera, then they will not be allowed to pickup or return an item?

This is what we originally thought "Profile" would look like:
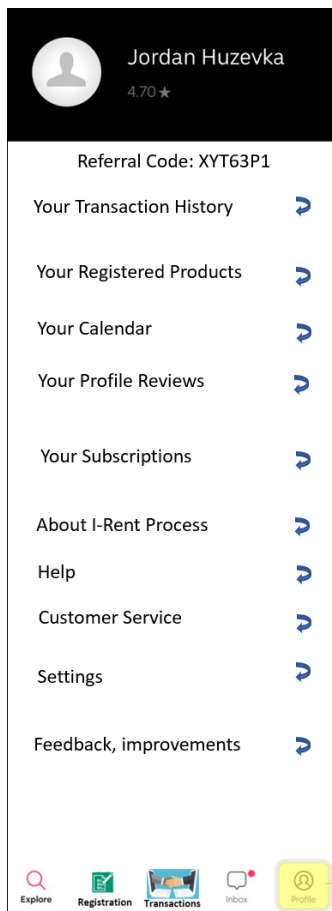

These profile components really make business easier which is what will differentiate us from the competitors. We really need to nail the profile components.

We need the following components: (we have previously submitted how these pages should look) We submitted these pages and how they should look in the prototype.

- Transaction History
  - o This is where the user can view previous and ongoing transactions

- o
- Registered Items
    - o See submission for Milestone 7.
- Calendar
    - o This is where the user can apply "unavailability" days to all products for vacations and time off. They can also set their weekly schedule for availability.

    - o
- Profile Reviews
    - o This is where you can view all of your personal profile reviews.
- Subscriptions
    - o This is where you can view your subscriptions (free at release)
- About NDR process (how it works) handled on side bar. Good. Doesn't need to go in profile.
- Help – goes in sidebar good. Doesn't need to go in profile.
- Customer Service goes in "help" in sidebar.
- Settings goes in sidebar, good.
- Feedback and Improvements section goes under "help" section.

Overall, what is needed from above: (In order) (This is what will be seen when a user clicks on their profile)

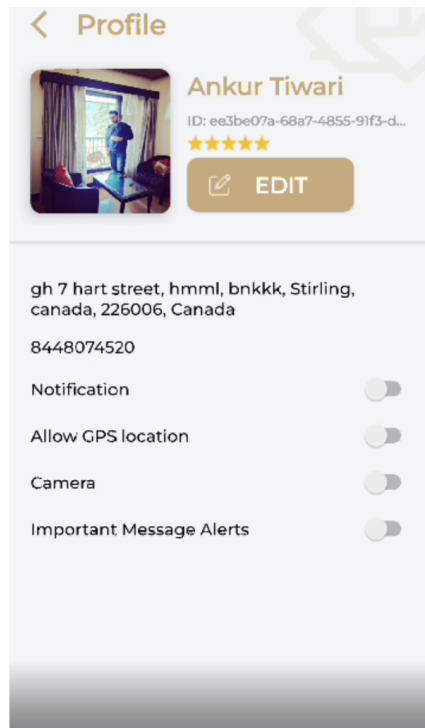

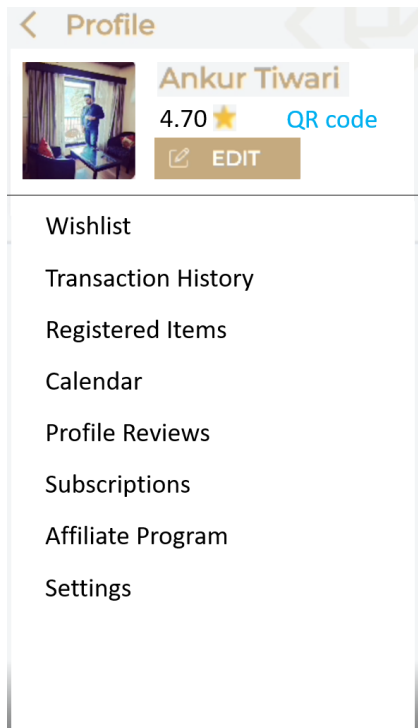

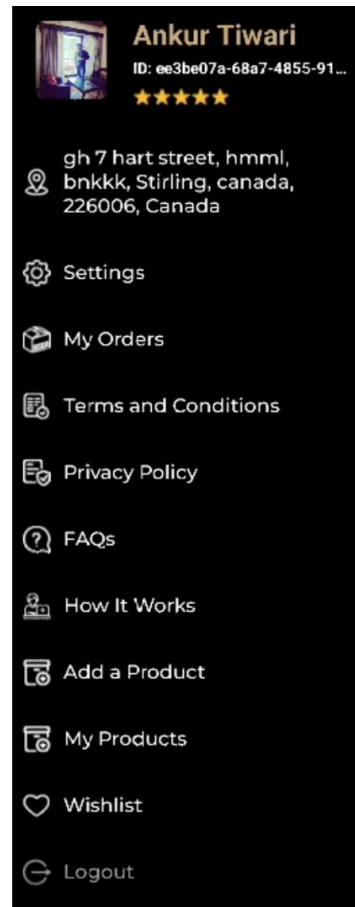

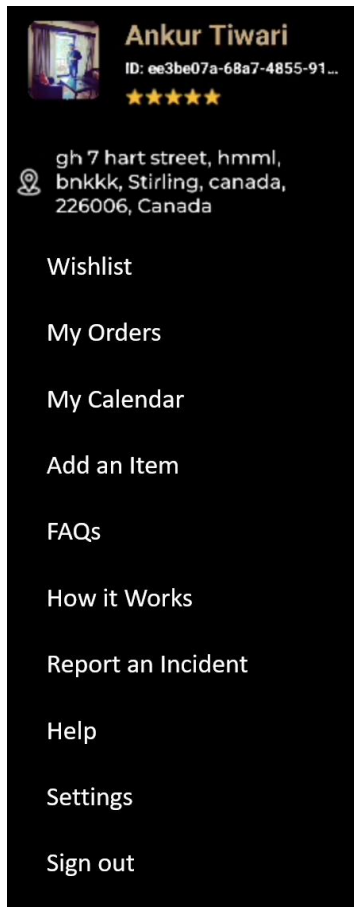

Please see above for how Profile should look and be set up.

The Menu Order and Subitems available from the Sidebar:

New Sidebar (Left) old, (right)

-
- New Order (see above)
  - o Wishlist (Covered already)
  - o My Orders

  - 1. Goes to this page from prototype:
  - o My Calendar (see above)
  - o Add an Item (shortcut to add an item located in profile – registered items – Add an item)
  - o FAQs
    The FAQ's are miniature text based question and answers. At the beginning of the page we will have the articles in PDF format for the users to download and read, followed by a list of short FAQs. The Articles are the first of the FAQ's.
  - o How it Works
    - 1. Slide show or YouTube presentation of slides of application and process.
  - o Report an Incident
    The user must include the transaction ID. .) They can add a description of the damages, add photos and PDFs of police reports if needed). This is the same "report an incident" function as on Renters and Lenders product return confirmation. These are issues that

users have with Products, People, Messages or Anything. These click buttons are built into the application at the appropriate area where, users can "Report" in person / product reviews, products and at item return, the lender can "report an incident" regarding the conduct of the renter. A side bar button is also added for anyone to report an incident at any time. For Lenders to keep the security deposit, they have to fill out an incident report, that will be approved by NDR to get compensation.

The user can select what this is about: Choices are,
1. Harassment / Inappropriate Behavior
2. Code of Conduct
3. Property Damage
4. Item Not as Advertised
5. and other

- o Help
- o Settings
- o Sign Out

- If there is a transaction that has an address that is deleted, that is not a problem. The transaction stores the pickup and return address at the time the transaction is accepted.
- Deleting an address will NOT delete a product. It will make the product unavailable for renting and not listed on NDR. Users need to get a notice "Are you sure you want to delete this address? All your products associated with this address will be un-listed." (If user has products associated with this address). To "Re-List" their products, user will simply have to add an address associated with the product. There needs to be some indicator in "My Products" that some products are "offline or Not-Listed".
